PROFESSIONAL SUMMARY

Full Stack Software Developer and founder of DalpaSoft, with experience in the design, development, and implementation of web and mobile applications, enterprise systems, and automation solutions. Proficient in technologies such as Angular, React, React Native, Next.js, .NET 10, NestJS, PHP, and relational and NoSQL databases. I have participated in the development of ERP systems, electronic invoicing (SRI), inventory management, OCR processing, and digital platforms. I currently lead DalpaSoft, an initiative focused on software product development, process automation, and technology solutions for companies.

TECHNICAL SKILLS

Frontend:
Frameworks/Libraries: React, Angular, Next.js
Languages: TypeScript, JavaScript
Styling: Tailwind CSS, CSS3, Material UI
Mobile Development:
React Native, Ionic, Kotlin, Java, Android Studio, Expo
Backend:
.NET 10 (C#), NestJS, Next.js, PHP
Architecture & Patterns:
Microservices, Kafka, DDD, CQRS, BFF
Data Persistence:
PostgreSQL, MySQL, SQLite, Oracle Database, Firebase, Supabase
Tools:
Git, GitHub, Docker, Jenkins, CI/CD
Methodologies:
Scrum, Kanban
Testing & Quality:
Unit Testing: JUnit, Jasmine
E2E Testing: Playwright, Selenium
API Testing: Postman, Swagger
Performance Testing: Apache JMeter
Security Testing: Burp Suite, OWASP ZAP
UI/UX Design & Prototyping:
Figma, Adobe XD, Penpot
Languages:
Spanish (Native), English (B1)

PROFESSIONAL EXPERIENCE

DalpaSoft | Founder & Software Developer
2026 - Present

Project: Product development and technology solutions
• Founded and developed DalpaSoft, a technology company focused on creating and commercializing software, process automation, and digital solutions for businesses.
• Designed and developed AtuRitmo, DalpaSoft's first product, a digital platform for students preparing for the CACES Medicine exam in Ecuador.
• Designed and developed CargaLitos EC, a platform focused on electric mobility that allows users to locate charging stations for electric vehicles, check availability, and plan routes in Ecuador.
• Developed web platforms using Angular for the frontend, Next.js for backend services and features, and Supabase for database management and associated services.
• Participated in the analysis, design, development, and implementation of digital products, considering scalability, maintainability, and user experience.
• Managed the product lifecycle, from planning and requirements definition through development and technological evolution.

Market Projects - External Services | Software Developer
2026 (4 months)
Project: Accounting System and ERP - Electronic Invoicing
• Developed accounting systems and ERPs for business management.
• Implemented sales, product management, and inventory control modules with Kardex (inflows, outflows, and stock valuation).
• Managed and created branches for multi-location operations.
• Implemented electronic invoicing with direct integration to SRI services.
• Built architecture based on BFF (Backend for Frontend), using .NET 10 for the backend and React for the frontend.
• Designed and developed an OCR-based system to automate media monitoring and radio content processing in Ecuador.
• Collaborated in an agile team (Scrum) and used Git for version control.

DB System - Personal Project | Full Stack Developer
August 2025 - March 2026 (7 months)
Project: POS and Electronic Invoicing System
• Designed and developed a management system for cafeterias and restaurants.
• Developed an electronic invoicing system for SMEs (SRI Ecuador).
• Implemented a cross-platform desktop application with Electron.
• Managed products, orders, users, and business reports.
• Built backend architecture based on NestJS.
• Optimized the system for partial offline operation.
• Developed a mobile application with React Native and Expo.

Financial Sector - External Services | Full Stack Developer
November 2025 - February 2026 (3 months)
Project: Bank Loan Simulator
• Developed a bank loan simulator for the Ecuadorian market.
• Implemented OCR to automate data capture from ID cards.
• Integrated facial recognition for identity validation.
• Developed financial logic for calculating installments and interest rates.

Photography Center - External Services | Frontend Developer
January 2025 - April 2025 (3 months)
Project: Lion Producciones Website

• Designed and developed a complete, responsive website for a photography center using React.
• Implemented an interface to display portfolios, services, and multimedia content.
• Optimized performance and improved user experience with a mobile-first design approach.
• Implemented portfolio filtering by category.

Birthday Page - External Services | Frontend Developer
August 2024 - October 2024 (2 months)
Project: Animated Landing Page
• Created an animated, responsive landing page with HTML, CSS, and JavaScript.
• Implemented interactivity, DOM animations, and a mobile-first structure.

Bus Ticket - External Services | Mobile Developer
January 2024 - June 2024 (5 months)
Project: Bus Ticket Mobile App
• Implemented an OCR system to automatically read Ecuadorian ID cards.
• Integrated Supabase for authentication, data storage, and user management.
• Implemented payment methods (PayPal and bank transfers).
• Developed a complete ticket purchase and management system within the app.

EDUCATION

Software Engineering
Universidad Técnica de Ambato
Ambato, Ecuador

ADDITIONAL INFORMATION

• Knowledge of software architecture patterns
• REST API development
• Version control with Git and GitHub
• Knowledge of Linux commands
• Basic knowledge of cloud services (AWS, Google Cloud) and virtual machines
• Development of process automation solutions
