PROFESSIONAL SUMMARY

Full Stack Software Engineer with experience developing web and mobile applications using React, React Native, .NET 10, NestJS, PHP, and relational/NoSQL databases. Worked on accounting and ERP systems with sales, inventory (Kardex), electronic invoicing (SRI), and OCR automation. Also implemented microservices, Kafka, DDD, and CQRS, applying clean architecture and scalability principles in projects.

TECHNICAL SKILLS

Frontend:

Frameworks/Libraries: React, Angular

Languages: TypeScript, JavaScript

Styling: Tailwind CSS, CSS3, Material UI

Mobile Development:

React Native, Ionic, Kotlin, Java, Android Studio

Backend:

.NET 10 (C#), NestJS, PHP

Architecture & Patterns:

Microservices, Kafka, DDD, CQRS

Data Persistence:

PostgreSQL, MySQL, SQLite, Oracle Database, Firebase, Supabase

Tools:

Git, GitHub, Docker, Jenkins, CI/CD

Methodologies:

Scrum, Kanban

Testing & Quality:

Unit Testing: JUnit, Jasmine

E2E Testing: Playwright, Selenium

API Testing: Postman, Swagger

Performance Testing: Apache JMeter

Security Testing: Burp Suite, OWASP ZAP

UI/UX Design & Prototyping:

Figma, Adobe XD, Penpot

Languages:

Spanish (Native), English (B1)

WORK EXPERIENCE

Market Project - External Services | Software Developer

May 2026 – Present (3 months)

Project: Accounting & ERP System - Electronic Invoicing

- Developed complete accounting ERP systems for business management

- Implemented sales, product management, and inventory control with Kardex (entries, exits, stock valuation)
- Managed multi-branch operations and created new branches
- Integrated electronic invoicing directly with SRI services (test and production environments)
- Designed BFF (Backend for Frontend) architecture using .NET 10 backend and React frontend
- Built an OCR-based system to automate radio media cut tracking for Ecuador
- Collaborated in an agile team (Scrum) with Git version control

CargaLito EC - Personal Project | Full Stack Developer

July 2026 – Present

Project: CargaLito EC - DB System Property

- Developed a free web app to help Ecuadorians find electric vehicle charging points
- Calculates optimal routes and battery autonomy estimates based on destination and duration criteria
- Real-time visualization of charging point status (enabled/disabled)
- Provides precise route mapping to selected charging stations

DB System - Personal Project | Full Stack Developer

August 2025 – March 2026 (7 months)

Project: DB System - Property of DB System

- Designed a complete system for cafés and restaurants
- Developed electronic invoicing for SMEs (SRI Ecuador)
- Built a cross-platform desktop application with Electron
- Managed products, orders, users, and business reports
- Backend architecture based on NestJS
- Optimized for partial offline operation
- Mobile app built with React Native + Expo

Financial Institutions - External Services | Full Stack Developer

November 2025 – February 2026 (3 months)

Project: Bank Loan Simulator

- Developed a credit simulator for the Ecuadorian banking market
- Implemented OCR to automate ID card data capture
- Integrated facial recognition for identity validation
- Built financial logic for calculating installments and interest rates

Photography Center - External Services | Frontend Developer

January 2025 – April 2025 (3 months)

Project: Lion Producciones Website

- Designed and developed a fully responsive website for a photography center using React
- Built a modern interface to display portfolios, services, and multimedia content
- Optimized performance and improved UX with mobile-first design
- Integrated filtering to let users explore portfolios by category

Birthday Page - External Services | Frontend Developer

August 2024 – October 2024 (2 months)

Project: Animated Landing Page

- Created an animated, responsive landing page with HTML, CSS, and JavaScript
- Implemented interactivity, DOM animations, and mobile-first structure

Bus Ticket - External Services | Mobile Developer

January 2024 – June 2024 (5 months)

Project: Bus Ticket Mobile App

- Implemented an OCR system to automatically read the Ecuadorian ID card

- Integrated Supabase for authentication, data storage, and user management
- Integrated payment methods (PayPal and bank transfers)
- Built a complete ticket purchasing and management system within the app

EDUCATION

Software Engineering

Technical University of Ambato

Ambato, Ecuador

ADDITIONAL INFORMATION

- Knowledge of software architecture patterns
- REST API development
- Version control with Git & GitHub
- Linux command line proficiency
- Basic knowledge of cloud services (AWS, Google Cloud) and virtual machines
